(54) Title: METHOD AND SYSTEM FOR COMMUNICATING WIRELESSLY BETWEEN DEVICES

(57) Abstract: The invention relates to a method and a system (200) for communicating wirelessly between devices. Wireless communication can be a very appropriate way of interconnecting nearby devices, such as devices located within a home. However, equipping all devices with a wireless transceiver may not be desirable. Furthermore, an ordinary user should be able to connect devices in a straightforward and convenient way. The invention addresses these issues by means of a wireless communication key (250, 260, 270). This is a key-like object equipped with a transceiver. A key can be attached to a device (220, 230, 240) for which a wireless connection is required. A key may have to be powered by the device to which it gets attached and can then establish a wireless connection (280, 282) with another device. The other device is determined by the key used. A key may be associated with a fixed endpoint device (210), permanently equipped with a transceiver (212). Alternatively, a key may be associated with a second key that is to be attached to the other device.
